# Xterm Control Sequences 

Edward Moy<br>University of California, Berkeley<br>Revised by<br>Stephen Gildea<br>X Consortium (1994)<br>Thomas Dickey<br>XFree86 Project (1996-2004)

## Definitions

The literal character $c$.
$C \quad$ A single (required) character.
$P_{s} \quad$ A single (usually optional) numeric parameter, composed of one of more digits.
$P_{m} \quad$ A multiple numeric parameter composed of any number of single numeric parameters, separated by $\square$; character(s). Individual values for the parameters are listed with $P_{s}$.
$P_{t} \quad$ A text parameter composed of printable characters.

## C1 (8-Bit) Control Characters

The xterm program recognizes both 8 -bit and 7-bit control characters. It generates 7-bit controls (by default) or 8-bit if S8C1T is enabled. The following pairs of 7-bit and 8 -bit control characters are equivalent:

| ESC | D |
| :--- | :--- |

Index (IND is $0 \times 84$ )

| ESC | E |
| :--- | :--- |

Next Line (NEL is $0 \times 85$ )

| ESC | H |
| :--- | :--- |

Tab Set (HTS is 0x88)

| ESC | M |
| :--- | :--- |

Reverse Index ( RI is 0x8d)

| ESC | N |
| :--- | :--- |

Single Shift Select of G2 Character Set ( $\widehat{\mathrm{SS} 2}$ is 0x8e): affects next character only

| ESC | O |
| :--- | :--- |

Single Shift Select of G3 Character Set (SS3 is 0x8f): affects next character only

| ESC | P |
| :--- | :--- |

Device Control String (DCS is 0x90)

```
ESC V
    Start of Guarded Area (SPA is 0x96)
EsC W
    End of Guarded Area (EPA is 0x97)
ESC X
    Start of String (sos is 0x98)
ESC Z
    Return Terminal ID (DECID is 0x9a). Obsolete form of CSI c}\mathrm{ (DA).
ESC [
    Control Sequence Introducer (CSI is 0x9b)
#ESC \
    String Terminator (\ST is 0x9c)
ESS []
    Operating System Command (\boxed{OsC}}\mathrm{ is 0x9d)
ESC ^^
    Privacy Message (PM is 0x9e)
ESC
    Application Program Command (|PC is 0x9f)
```

These control characters are used in the vtXXX emulation.

## VT100 Mode

Most of these control sequences are standard VT102 control sequences, but there is support for later DEC VT terminals (i.e., VT220, VT320, VT420), as well as ISO 6429 and aixterm color controls. The only VT102 features not supported is auto-repeat, since the only way X provides for this will affect all windows. There are additional control sequences to provide xterm-dependent functions, such as the scrollbar or window size. Where the function is specified by DEC or ISO 6429, the code assigned to it is given in parentheses. The escape codes to designate and invoke character sets are specified by ISO 2022; see that document for a discussion of character sets.

## Single-character functions

| BEL | Bell (Ctrl-G) |
| :---: | :---: |
| BS | Backspace (Ctrl-H) |
| CR | Carriage Return (Ctrl-M) |
| ENQ | Return Terminal Status (Ctrl-E). Default response is an empty string, but may be overridden by a resource answerbackString. |
| FF | Form Feed or New Page (NP) (Ctrl-L) same as LF |
| LF | Line Feed or New Line (NL) (Ctrl-J) |
| so | Shift Out (Ctrl-N) $\rightarrow$ Switch to Alternate Character Set: invokes the G1 character set. |
| SP | Space. |
| TAB | Horizontal Tab (HT) (Ctrl-I) |
| vt | Vertical Tab (Ctrl-K) same as LF |
| SI | Shift In (Ctrl-O) $\rightarrow$ Switch to Standard Character Set: invokes the G0 character set (the default). |

Controls beginning with ESC (other than those where ESC is part of a 7-bit equivalent to 8-bit C1 controls), ordered by the final character(s).

| ESC | SP | F |
| :---: | :---: | :---: |
| ESC | SP | G |
| ESC | SP | L |
| ESC | SP | M |
| ESC | SP | N |
| ESC | \# | 3 |
| ESC | \# | 4 |
| ESC | \# | 5 |
| ESC | \# | 6 |
| ESC | \# | 8 |
| ESC | \% | @ |
| ESC | \% | G |
| ESC | ( $C$ | C |
| ESC | $) C$ | C |
| ESC | C | C |
| ESC | + $C$ | C |

| ESC | 7 |
| :--- | :--- |
| ESC | 8 |
| ESC | $=$ |
| ESC | $>$ |
| ESC | F |
|  |  |

7-bit controls (S7C1T).
8 -bit controls (S8C1T).
Set ANSI conformance level 1 (dpANS X3.134.1).
Set ANSI conformance level 2 (dpANS X3.134.1).
Set ANSI conformance level 3 (dpANS X3.134.1).
DEC double-height line, top half (DECDHL)
DEC double-height line, bottom half (DECDHL)
DEC single-width line (DECSWL)
DEC double-width line (DECDWL)
DEC Screen Alignment Test (DECALN)
Select default character set, ISO 8859-1 (ISO 2022)
Select UTF-8 character set (ISO 2022)
Designate G0 Character Set (ISO 2022)
Designate G1 Character Set (ISO 2022)
Designate G2 Character Set (ISO 2022)
Designate G3 Character Set (ISO 2022)
Final character $C$ for designating character sets $(\square, \mathrm{A}$ and B apply to VT100 and up, the remainder to VT220 and up):
$C=0 \rightarrow$ DEC Special Character and Line Drawing Set
$C=\mathrm{A} \rightarrow$ United Kingdom (UK)
$C=\mathrm{B} \rightarrow$ United States (USASCII)
$C=4 \rightarrow$ Dutch
$C=\mathrm{C}$ or $5 \rightarrow$ Finnish
$C=\mathrm{R} \rightarrow$ French
$C=\mathrm{Q} \rightarrow$ French Canadian
$C=\mathrm{K} \rightarrow$ German
$C=\mathrm{Y} \rightarrow$ Italian
$C=\mathrm{E}$ or $6 \rightarrow$ Norwegian/Danish
$C=\mathrm{Z} \rightarrow$ Spanish
$C=\mathrm{H}$ or $7 \rightarrow$ Swedish
$C=\rightarrow \rightarrow$ Swiss
Save Cursor (DECSC)
Restore Cursor (DECRC)
Application Keypad (DECPAM)
Normal Keypad (DECPNM)
Cursor to lower left corner of screen (if enabled by the hpLowerleftBugCompat resource).
Full Reset (RIS)

| ESC | 1 |
| :---: | :---: |
| ESC | m |
| ESC | n |
| ESC | 0 |
| ESC | 1 |
| ESC | \} |
| ESC | $\sim$ |

[^0]
## Application Program-Control functions

$\triangle \mathrm{APC} P_{t} \boxed{\mathrm{ST}}$
xterm implements no APC functions; $P_{t}$ is ignored. $P_{t}$ need not be printable characters.

## Device-Control functions

$\boxed{\mathrm{DCS}} P_{s} \square P_{s} \square P_{t} \boxed{\mathrm{sT}} \quad$| User-Defined Keys (DECUDK). The first parameter: |  |
| ---: | :--- |
| $P_{S}$ | $=0$ |
| $P_{s}$ | $=1$ |$\rightarrow$ Clear all UDK definitions before starting (default)

The second parameter:
$P_{S}=0 \rightarrow$ Lock the keys (default)
$P_{s}=1 \rightarrow$ Do not lock.
The third parameter is a ';'-separated list of strings denoting the key-code separated by a '/' from the hex-encoded key value. The key codes correspond to the DEC function-key codes (e.g., F6=17).

| DCS | $\$$ | q | $P_{t} \mathrm{ST} \quad$ Request Status String (DECRQSS). The string following the " $\mathrm{q} "$ is one of the following: |
| :--- | :--- | :--- | :--- |

| $" \mathrm{q}$ | $\rightarrow$ DECSCA |
| :--- | :--- |
| $\cdots " \mathrm{p}$ | $\rightarrow$ DECSCL |
| r |  |
| m | $\rightarrow$ DECSTBM |
| m | $\rightarrow$ SGR |

 corresponding CSI string, or | DCS | 0 | $\$$ | r |
| :--- | :--- | :--- | :--- |$P_{t} \mathrm{ST}$ for invalid requests.

$\mathrm{DCS} \quad+\mathrm{q} P_{t} \mathrm{ST} \quad$ Request Termcap/Terminfo String (xterm, experimental). The string following the "q" is a list of names encoded in hexadecimal (2 digits per character) separated by $\square$; which correspond to termcap or terminfo key names.

 for invalid requests. The strings are encoded in hexadecimal ( 2 digits per character).

Functions using CsI , ordered by the final character(s)

| $\boxed{\mathrm{CSI}} P_{s} @$ | Insert $P_{s}($ Blank $)$ Character $(\mathrm{s})($ default $=1)(\mathrm{ICH})$ |
| :--- | :--- |
| $\boxed{\mathrm{CSI}} P_{s} \mathrm{~A}$ | Cursor Up $P_{s}$ Times $($ default $=1)(\mathrm{CUU})$ |
| CSI | $P_{s} \mathrm{~B}$ |

Initiate hilite mouse tracking. Parameters are [func;startx;starty;firstrow;lastrow]. See the section Mouse Tracking.
${ }_{\square C S I} P_{s} \quad \mathrm{X} \quad$ Erase $P_{s}$ Character $(\mathrm{s})($ default $=1)(\mathrm{ECH})$
$\mathrm{CSI}^{\mathrm{CSI}} P_{s} \mathrm{Z} \quad$ Cursor Backward Tabulation $P_{s}$ tab stops $($ default $=1)(\mathrm{CBT})$

CSI $P_{m} \square$ Character Position Absolute [column] (default $=[$ row, 1] $)(\mathrm{HPA})$
$\boxed{\mathrm{CSI}} P_{s} \mathrm{~b} \quad$ Repeat the preceding graphic character $P_{S}$ times (REP)
$\triangle \mathrm{CSI} P_{s} \boxed{\mathrm{c}} \quad$ Send Device Attributes (Primary DA)
$P_{s}=0,1$ or omitted $\rightarrow$ request attributes from terminal. The response depends on the
decTerminalID resource setting.

| CSI | ? | 1 | ; | 2 | c | ("VT100 with Advanced Video Option") |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\rightarrow \mathrm{CSI}$ | ? | 1 | ; | 0 | c | ("VT101 with No Options") |
| $\rightarrow$ CSI | ? | 6 | c |  |  |  |

$\rightarrow$| CSI | $?$ | 6 | 0 | $;$ | 1 | $;$ | 2 | $;$ | 6 | $;$ | 8 | $;$ | 9 | $;$ | 1 | 5 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

("VT220")
The VT100-style response parameters do not mean anything by themselves. VT220
parameters do, telling the host what features the terminal supports:
$\rightarrow 1$ 132-columns
$\rightarrow 2$ Printer
$\rightarrow 6$ Selective erase
$\rightarrow 8$ User-defined keys
$\rightarrow 9$ National replacement character sets
$\rightarrow 115$ Technical characters
$\rightarrow 22$ ANSI color, e.g., VT525
$\rightarrow 29$ ANSI text locator (i.e., DEC Locator mode)

${ }^{\mathrm{CSI}} P_{m} \boxed{\mathrm{~h}}$

| CSI | $?$ | $P_{m} \mathrm{~h}$ |
| :--- | :--- | :--- |

Send Device Attributes (Secondary DA)
$P_{s}=0,1$ or omitted $\rightarrow$ request the terminal's identification code. The response depends on the decTerminalID resource setting. It should apply only to VT220 and up, but xterm extends this to VT100.

$$
\rightarrow \mathrm{CSI} \triangle P_{p} \boxed{;} P_{v} \boxed{\square} P_{c} \boxed{\mathrm{c}}
$$

where $P_{p}$ denotes the terminal type
$\rightarrow 0$ ("VT100")
$\rightarrow 1$ ("VT220")
and $P_{v}$ is the firmware version (for xterm, this is the XFree86 patch number, starting with 95). In a DEC terminal, $P_{c}$ indicates the ROM cartridge registration number and is always zero.

Line Position Absolute [row] (default $=[1$, column $])(V P A)$
Horizontal and Vertical Position [row;column] (default $=[1,1])(H V P)$
Tab Clear (TBC)
$P_{s}=0 \rightarrow$ Clear Current Column (default)
$P_{s}=3 \rightarrow$ Clear All

> Set Mode (SM)
> $P_{s}=2 \rightarrow$ Keyboard Action Mode (AM)
> $P_{s}=4 \rightarrow$ Insert Mode (IRM)
> $P_{s}=1$ Q $\rightarrow$ Send/receive (SRM)
> $P_{s}=2,0 \rightarrow$ Automatic Newline (LNM)

DEC Private Mode Set (DECSET)
$P_{s}=1 \rightarrow$ Application Cursor Keys (DECCKM)
$P_{s}=2 \rightarrow$ Designate USASCII for character sets G0-G3 (DECANM), and set VT100
mode.

$$
\begin{aligned}
& P_{s}=3 \rightarrow 132 \text { Column Mode (DECCOLM) } \\
& P_{s}=4 \rightarrow \text { Smooth (Slow) Scroll (DECSCLM) } \\
& P_{s}=5 \rightarrow \text { Reverse Video }(\text { DECSCNM }) \\
& P_{s}=6 \rightarrow \text { Origin Mode }(\text { DECOM })
\end{aligned}
$$

$P_{s}=7 \rightarrow$ Wraparound Mode (DECAWM)
$P_{S}=8 \rightarrow$ Auto-repeat Keys (DECARM)
$P_{s}=9 \rightarrow$ Send Mouse X \& Y on button press. See the section Mouse Tracking.
$P_{S}=1 \quad 0 \rightarrow$ Show toolbar (rxvt)
$P_{S}=1$ 2 $\rightarrow$ Start Blinking Cursor (att610)
$P_{s}=118 \rightarrow$ Print form feed (DECPFF)
$P_{s}=1 \quad 9 \rightarrow$ Set print extent to full screen (DECPEX)
$P_{s}=25 \rightarrow$ Show Cursor (DECTCEM)
$P_{S}=3 \quad 0 \rightarrow$ Show scrollbar (rxvt).
$P_{s}=35 \rightarrow$ Enable font-shifting functions (rxvt).
$P_{s}=3-8 \rightarrow$ Enter Tektronix Mode (DECTEK)
$P_{S}=4 \quad 0 \rightarrow$ Allow $80 \leftrightarrow 132$ Mode
$P_{S}=4 \quad 1 \rightarrow \operatorname{more}(1)$ fix (see curses resource)
$P_{s}=422 \rightarrow$ Enable Nation Replacement Character sets (DECNRCM)
$P_{S}=4 \quad 4 \rightarrow$ Turn On Margin Bell
$P_{s}=45 \rightarrow$ Reverse-wraparound Mode
$P_{s}=4$ 6 Start Logging (normally disabled by a compile-time option)
$P_{s}=4 \rightarrow 7 \rightarrow$ Use Alternate Screen Buffer (unless disabled by the titeInhibit
resource)
$P_{S}=6 \quad 6 \rightarrow$ Application keypad (DECNKM)
$P_{s}=67 \rightarrow$ Backarrow key sends delete (DECBKM)

$P_{s}=$| 1 | 0 | 0 | 0 |
| :--- | :--- | :--- | :--- |$\rightarrow$ Send Mouse X \& Y on button press and release. See the sec-

tion Mouse Tracking.

$P_{S}=$| 1 | 0 | 0 | 1 |
| :--- | :--- | :--- | :--- |$\rightarrow$ Use Hilite Mouse Tracking.

$P_{s}=$| 1 | 0 | 0 | 2 |
| :--- | :--- | :--- | :--- | :--- |$\rightarrow$ Use Cell Motion Mouse Tracking.

$P_{s}=$| 1 | 0 | 0 | 3 |
| :--- | :--- | :--- | :--- |

$P_{S}=$| 1 | 0 | 1 | 0 | $\rightarrow$ Scroll to bottom on tty output (rxvt). |
| :--- | :--- | :--- | :--- | :--- |

$P_{S}=$| 1 | 0 | 1 | 1 |
| :--- | :--- | :--- | :--- |$\rightarrow$ Scroll to bottom on key press (rxvt).

$P_{s}=$| 1 | 0 | 3 | 5 |
| :--- | :--- | :--- | :--- | :--- |$\rightarrow$ Enable special modifiers for Alt and NumLock keys.

$P_{s}=$| 1 | 0 | 3 | 6 |
| :--- | :--- | :--- | :--- | :--- |$\rightarrow$ Send ESC when Meta modifies a key (enables the metaSend-

## sEscape resource).

$P_{S}=$| 1 | 0 | 3 | 7 |
| :--- | :--- | :--- | :--- |$\rightarrow$ Send DEL from the editing-keypad Delete key

$P_{s}=$| 1 | 0 | 4 | 7 |
| :--- | :--- | :--- | :--- | :--- |$\rightarrow$ Use Alternate Screen Buffer (unless disabled by the titeIn-

hibit resource)

$P_{s}=$| 1 | 0 | 4 | 8 |
| :--- | :--- | :--- | :--- | :--- |$\rightarrow$ Save cursor as in DECSC (unless disabled by the titeInhibit resource)

$P_{s}=$| 1 | 0 | 4 | 9 |
| :--- | :--- | :--- | :--- |$\rightarrow$ Save cursor as in DECSC and use Alternate Screen Buffer,

clearing it first (unless disabled by the titeInhibit resource). This combines the effects of
 cations rather than the 4,7 mode.

$P_{s}=$| 1 | 0 | 5 | 1 |
| :--- | :--- | :--- | :--- |$\rightarrow$ Set Sun function-key mode.

$P_{s}=$| 1 | 0 | 5 | 2 |
| :--- | :--- | :--- | :--- |$\rightarrow$ Set HP function-key mode.

$P_{S}=$| 1 | 0 | 5 | 3 |
| :--- | :--- | :--- | :--- | :--- |$\rightarrow$ Set SCO function-key mode.

$P_{S}=$| 1 | 0 | 6 | 0 |
| :--- | :--- | :--- | :--- | :--- |

$P_{S}=$| 1 | 0 | 6 | 1 |
| :--- | :--- | :--- | :--- |$\rightarrow$ Set Sun/PC keyboard emulation of VT220 keyboard.

${ }^{\mathrm{CSI}} P_{m} \stackrel{\mathrm{i}}{ }$

| CSI | $?$ | $P_{m}$ |
| :--- | :--- | :--- |

${ }^{\mathrm{CSI}} P_{m} \square 1$

CSI $? P_{m} \square 1$

Media Copy (MC)
$P_{S}=0 \rightarrow$ Print screen (default)
$P_{s}=4 \rightarrow$ Turn off printer controller mode
$P_{s}=5 \rightarrow$ Turn on printer controller mode
Media Copy (MC, DEC-specific)
$P_{s}=1 \rightarrow$ Print line containing cursor
$P_{S}=4 \rightarrow$ Turn off autoprint mode
$P_{s}=5 \rightarrow$ Turn on autoprint mode
$P_{s}=1 \rightarrow 0 \rightarrow$ Print composed display, ignores DECPEX
$P_{s}=1 \quad 1 \rightarrow$ Print all pages

## Reset Mode (RM)

$P_{s}=2 \rightarrow$ Keyboard Action Mode (AM)
$P_{s}=4 \rightarrow$ Replace Mode (IRM)
$P_{s}=1 \quad 2 \rightarrow$ Send/receive (SRM)
$P_{s}=2 \quad 0 \rightarrow$ Normal Linefeed (LNM)
DEC Private Mode Reset (DECRST)
$P_{s}=1 \rightarrow$ Normal Cursor Keys (DECCKM)
$P_{s}=2 \rightarrow$ Designate VT52 mode (DECANM).
$P_{s}=3 \rightarrow 80$ Column Mode (DECCOLM)
$P_{s}=4 \rightarrow$ Jump (Fast) Scroll (DECSCLM)
$P_{s}=5 \rightarrow$ Normal Video (DECSCNM)
$P_{s}=6 \rightarrow$ Normal Cursor Mode (DECOM)
$P_{S}=7 \rightarrow$ No Wraparound Mode (DECAWM)
$P_{s}=8 \rightarrow$ No Auto-repeat Keys (DECARM)
$P_{S}=9 \rightarrow$ Don't Send Mouse X \& Y on button press
$P_{s}=1 \quad 0 \rightarrow$ Hide toolbar (rxvt)
$P_{S}=1$ 2 Stop Blinking Cursor (att610)
$P_{s}=1 \quad 8 \rightarrow$ Don't print form feed (DECPFF)
$P_{s}=1 \quad 9 \rightarrow$ Limit print to scrolling region (DECPEX)
$P_{s}=25 \rightarrow$ Hide Cursor (DECTCEM)
$P_{s}=300 \rightarrow$ Don't show scrollbar (rxvt).
$P_{s}=35 \rightarrow$ Disable font-shifting functions (rxvt).
$P_{s}=4 \quad 0 \rightarrow$ Disallow $80 \leftrightarrow 132$ Mode
$P_{S}=4 \quad 1 \rightarrow \operatorname{No} \operatorname{more}(1)$ fix (see curses resource)
$P_{s}=4 \quad 2 \rightarrow$ Disable Nation Replacement Character sets (DECNRCM)
$P_{S}=44 \rightarrow$ Turn Off Margin Bell
$P_{s}=45 \rightarrow$ No Reverse-wraparound Mode
$P_{s}=46 \rightarrow$ Stop Logging (normally disabled by a compile-time option)
$P_{S}=47 \rightarrow$ Use Normal Screen Buffer
$P_{s}=6 \quad 6 \rightarrow$ Numeric keypad (DECNKM)
$P_{s}=67 \rightarrow$ Backarrow key sends backspace (DECBKM)

$P_{s}=$| 1 | 0 | 0 | 0 |
| :--- | :--- | :--- | :--- | :--- |$\rightarrow$ Don't Send Mouse X \& Y on button press and release. See the section Mouse Tracking.

$P_{s}=$| 1 | 0 | 0 | 1 |
| :--- | :--- | :--- | :--- |$\rightarrow$ Don't Use Hilite Mouse Tracking

$P_{s}=$| 1 | 0 | 0 | 2 |
| :--- | :--- | :--- | :--- | :--- |

$P_{s}=$| 1 | 0 | 0 | 3 |
| :--- | :--- | :--- | :--- | :--- |$\rightarrow$ Don't Use All Motion Mouse Tracking

$P_{s}=$| 1 | 0 | 1 | 0 |
| :--- | :--- | :--- | :--- | :--- |$\rightarrow$ Don't scroll to bottom on tty output (rxvt).

$P_{s}=$| 1 | 0 | 1 | 1 |
| :--- | :--- | :--- | :--- | :--- |$\rightarrow$ Don't scroll to bottom on key press (rxvt).

$P_{s}=$| 1 | 0 | 3 | 5 |
| :--- | :--- | :--- | :--- | :--- |$\rightarrow$ Disable special modifiers for Alt and NumLock keys.

$P_{s}=$|  | 0 | 3 | 6 |
| :--- | :--- | :--- | :--- |$\rightarrow$ Don't send ESC when Meta modifies a key (disables the

metaSendsEscape resource).

$P_{s}=$| 1 | 0 | 3 | 7 |
| :--- | :--- | :--- | :--- | :--- |$\rightarrow$ Send VT220 Remove from the editing-keypad Delete key $P_{s}=$| 1 | 0 | 4 | 7 |
| :--- | :--- | :--- | :--- | :--- |$\rightarrow$ Use Normal Screen Buffer, clearing screen first if in the Alternate Screen (unless disabled by the titeInhibit resource) $P_{s}=$| 1 | 0 | 4 | 8 |
| :--- | :--- | :--- | :--- |$\rightarrow$ Restore cursor as in DECRC (unless disabled by the titeInhibit resource)

$P_{s}=$| 1 | 0 | 4 | 9 |
| :--- | :--- | :--- | :--- |$\rightarrow$ Use Normal Screen Buffer and restore cursor as in DECRC (unless disabled by the titeInhibit resource). This combines the effects of the | 1 | 0 | 4 | 7 | and |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | tions rather than the 4

$P_{S}=$| 1 | 0 | 5 | 1 |
| :--- | :--- | :--- | :--- |$\rightarrow$ Reset Sun function-key mode.

$P_{S}=$| 1 | 0 | 5 | 2 |
| :--- | :--- | :--- | :--- | :--- |$\rightarrow$ Reset HP function-key mode.

$P_{S}=$| 1 | 0 | 5 | 3 |
| :--- | :--- | :--- | :--- | :--- |

$P_{s}=$| 1 | 0 | 6 | 0 |
| :--- | :--- | :--- | :--- |$\rightarrow$ Reset legacy keyboard emulation (X11R6).

$P_{S}=$| 1 | 0 | 6 | 1 |
| :--- | :--- | :--- | :--- |$\rightarrow$ Reset Sun/PC keyboard emulation of VT220 keyboard.

${ }^{\mathrm{CSI}} P_{m} \longrightarrow \mathrm{~m}$

> Character Attributes (SGR)

$P_{s}=3 \rightarrow 9 \rightarrow$ Set foreground color to default (original)
$P_{S}=400 \rightarrow$ Set background color to Black
$P_{S}=4 \quad 1 \rightarrow$ Set background color to Red
$P_{s}=42 \rightarrow$ Set background color to Green
$P_{S}=4 \quad 3 \rightarrow$ Set background color to Yellow
$P_{s}=44 \rightarrow$ Set background color to Blue

$P_{s}=$| 4 | 5 |
| :--- | :--- | Set background color to Magenta

$P_{S}=4 \quad 6 \rightarrow$ Set background color to Cyan
$P_{s}=4 \rightarrow 7 \rightarrow$ Set background color to White
$P_{s}=49 \rightarrow$ Set background color to default (original).

If 16-color support is compiled, the following apply. Assume that xterm's resources are set so that the ISO color codes are the first 8 of a set of 16 . Then the aixterm colors are the bright versions of the ISO colors:

$$
\begin{aligned}
& P_{S}=9 \quad 0 \rightarrow \text { Set foreground color to Black } \\
& P_{s}=9 \rightarrow 1 \rightarrow \text { Set foreground color to Red } \\
& P_{S}=9 \rightarrow 2 \rightarrow \text { Set foreground color to Green } \\
& P_{s}=9 \rightarrow 3 \rightarrow \text { Set foreground color to Yellow } \\
& P_{s}=94 \rightarrow \text { Set foreground color to Blue } \\
& P_{S}=\begin{array}{|c|c|}
\hline & 5
\end{array} \rightarrow \text { Set foreground color to Magenta } \\
& P_{s}=96 \rightarrow \text { Set foreground color to Cyan } \\
& P_{S}=9 \rightarrow 7 \rightarrow \text { Set foreground color to White } \\
& P_{s}=1 \text { 0 } 0 \text { O Set background color to Black } \\
& P_{s}=\begin{array}{l|l|l}
\hline 1 & 0 & 1
\end{array} \rightarrow \text { Set background color to Red } \\
& P_{s}=\begin{array}{l|l|l}
\hline 1 & 0 & 2
\end{array} \rightarrow \text { Set background color to Green } \\
& P_{s}=\begin{array}{|l|l|l}
1 & 0 & 3
\end{array} \rightarrow \text { Set background color to Yellow } \\
& P_{s}=\begin{array}{|l|l|l|}
\hline 1 & 0 & 4 \\
\hline
\end{array} \\
& P_{S}=\begin{array}{|l|l|l|l}
\hline 1 & 0 & 5 \\
\hline
\end{array} \rightarrow \text { Set background color to Magenta } \\
& P_{s}=\begin{array}{l|l|l}
\hline 1 & 0 & 6
\end{array} \text { Set background color to Cyan } \\
& P_{S}=\begin{array}{l|l|l}
\hline 1 & 0 & 7
\end{array} \rightarrow \text { Set background color to White }
\end{aligned}
$$

If xterm is compiled with the 16 -color support disabled, it supports the following, from rxvt:

$P_{S}=$| 1 | 0 | 0 |
| :--- | :--- | :--- |$\rightarrow$ Set foreground and background color to default

If 88- or 256-color support is compiled, the following apply.
$P_{s}=3 \quad 8 ; 5 ; P_{s} \rightarrow$ Set foreground color to the second $P_{s}$
$P_{s}=4$; 8 ; $5 ; P_{s} \rightarrow$ Set background color to the second $P_{s}$

| $\mathrm{CSI} P_{s} \mathrm{n}$ | Device Status Report (DSR) |
| :---: | :---: |
|  | $P_{s}=5 \rightarrow$ Status ReportCSI 0 n ("OK") |
|  | $P_{s}=6 \rightarrow$ Report Cursor Position (CPR) [row;column] as $\square$ $c \mathrm{R}$ |
| CSI $?$ $P_{S} \mathrm{n}$ | Device Status Report (DSR, DEC-specific) |
|  |  |

(assumes page is zero).

| CSI | $?$ | 1 | 1 | n | (not ready) |
| :--- | :--- | :--- | :--- | :--- | :--- |

| CSI | $?$ | 2 | 1 | n | (locked) |
| :--- | :--- | :--- | :--- | :--- | :--- |

$P_{s}=266 \rightarrow$ Report Keyboard status as

| CSI | $?$ | 2 | 7 | $;$ | 1 | $;$ | 0 | $;$ | 0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

The last two parameters apply to VT400 \& up, and denote keyboard ready and LK01 respectively.
$P_{S}=5 \quad 3 \rightarrow$ Report Locator status as

| CSI | $?$ | 5 | 3 | n | Locator available, if compiled-in, or |
| :--- | :--- | :--- | :--- | :--- | :--- |

| CSI | $?$ | 5 | 0 | n | No Locator, if not. |
| :--- | :--- | :--- | :--- | :--- | :--- |

| CSI | $!$ |
| :--- | :--- |

| CSI | $P_{S} \square ;$ |
| :--- | :--- |
|  | $P_{S} \square$ |

Soft terminal reset (DECSTR)
Set conformance level (DECSCL) Valid values for the first parameter:
$P_{s}=6 \quad 1 \rightarrow \mathrm{VT} 100$
$P_{s}=6 \quad 2 \rightarrow \mathrm{VT} 200$
$P_{s}=6 \rightarrow 3 \rightarrow$ VT300
Valid values for the second parameter:
$P_{S}=0 \rightarrow 8$-bit controls
$P_{s}=1 \rightarrow 7$-bit controls (always set for VT100)
$P_{s}=2 \rightarrow 8$-bit controls
$\overline{\mathrm{CSI}} P_{s} \times \ddot{\mathrm{q}} \mathrm{q}$ Select character protection attribute (DECSCA). Valid values for the parameter:
$P_{s}=0 \rightarrow$ DECSED and DECSEL can erase (default)
$P_{s}=1 \rightarrow$ DECSED and DECSEL cannot erase
$P_{s}=2 \rightarrow$ DECSED and DECSEL can erase
$\boxed{\mathrm{CSI}} P_{s} \square ; P_{s} \boxed{\mathrm{r}} \quad$ Set Scrolling Region [top;bottom] (default $=$ full size of window) $($ DECSTBM $)$

| CSI | $?$ | $P_{m} \quad \mathrm{r} \quad$ Restore DEC Private Mode Values. The value of $P_{s}$ previously saved is restored. $P_{s}$ val- -2. |
| :--- | :--- | :--- | :--- | ues are the same as for DECSET.

Change Attributes in Rectangular Area (DECCARA).

$$
P_{t} \boxed{;} P_{\square} ; P_{b} \boxed{;} P_{r} \text { denotes the rectangle. }
$$

$P_{S}$ denotes the SGR attributes to change: $0,1,4,5,7$

Reverse Attributes in Rectangular Area (DECRARA).
$P_{t} \square P_{\square} \square P_{b} \square ; P_{r}$ denotes the rectangle.
$P_{s}$ denotes the attributes to reverse. $1,4,5,7$

Copy Rectangular Area (DECCRA)
$P_{\downarrow} \backslash P_{\downarrow} \square P_{b} \square ; P_{r}$ denotes the rectangle.
$P_{p}$ denotes the source page.
$P_{t} \square P_{l}$ denotes the target location.
$P_{p}$ denotes the target page.
${ }^{\mathrm{CSI}} P_{t} \square ; P_{l} \square ; P_{b} \square ; P_{r} \square, \mathrm{w}$
Enable Filter Rectangle (DECEFR)
Parameters are [top;left;bottom;right].
Defines the coordinates of a filter rectangle and activates it. Anytime the locator is
detected outside of the filter rectangle, an outside rectangle event is generated and the rectangle is disabled. Filter rectangles are always treated as "one-shot" events. Any parameters that are omitted default to the current locator position. If all parameters are omitted, any locator motion will be reported. DECELR always cancels any prevous rectangle definition.

$\overline{\mathrm{CsI}} P_{s} \mathrm{x} \quad$ Select Attribute Change Extent (DECSACE).
$P_{s}=0 \rightarrow$ from start to end position, wrapped
$P_{s}=1 \rightarrow$ from start to end position, wrapped
$P_{s}=2 \rightarrow$ rectangle (exact).

|  | CSI | $P$ |  | ? |  |  |  | $P b$ |  |  | $P$ | \$ | x | x |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Fill Rectangular Area (DECFRA).
$P_{c}$ is the character to use.
$P_{\downarrow} ; P_{\square} ; P_{b}$; $P_{r}$ denotes the rectangle.
$\boxed{\mathrm{CSI}} P_{s} \square ; P_{u} \square^{\prime} \square \mathrm{z} \quad$ Enable Locator Reporting (DECELR)
Valid values for the first parameter:
$P_{S}=0 \rightarrow$ Locator disabled (default)
$P_{s}=1 \rightarrow$ Locator enabled
$P_{s}=2 \rightarrow$ Locator enabled for one report, then disabled
The second parameter specifies the coordinate unit for locator reports.
Valid values for the second parameter:
$P_{u}=0$ or omitted $\rightarrow$ default to character cells
$P_{u}=1 \rightarrow$ device physical pixels
$P_{u}=2 \rightarrow$ character cells

Erase Rectangular Area (DECERA).
$P_{\downarrow} \square ; P_{\square} \square P_{b} \square ; P_{r}$ denotes the rectangle.

## $\boxed{\mathrm{CsI}} P_{m}{ }^{\prime} \square\{\quad$ Select Locator Events (DECSLE)

Valid values for the first (and any additional parameters) are:
$P_{s}=0 \rightarrow$ only respond to explicit host requests (DECRQLP)
(default) also cancels any filter rectangle
$P_{s}=1 \rightarrow$ report button down transitions
$P_{S}=2 \rightarrow$ do not report button down transitions
$P_{S}=3 \rightarrow$ report button up transitions
$P_{s}=4 \rightarrow$ do not report button up transitions

Selective Erase Rectangular Area (DECSERA).
$P_{t} \stackrel{;}{\square} P_{\boxed{\prime}} ; P_{b} \square ; P_{r}$ denotes the rectangle.

## Request Locator Position (DECRQLP)

Valid values for the parameter are:
$P_{S}=0,1$ or omitted $\rightarrow$ transmit a single DECLRP locator report

If Locator Reporting has been enabled by a DECELR, xterm will respond with a DECLRP Locator Report. This report is also generated on button up and down events if they have been enabled with a DECSLE, or when the locator is detected outside of a filter rectangle, if filter rectangles have been enabled with a DECEFR.

$$
\rightarrow \mathrm{CSI} P_{e} \boxed{\square} P_{b} \boxed{;} P_{r} \square ; P_{c} \boxed{\square} P_{p} \boxed{\mathrm{w}}
$$

Parameters are [event;button;row;column;page].
Valid values for the event:
$P_{e}=0 \rightarrow$ locator unavailable - no other parameters sent
$P_{e}=1 \rightarrow$ request - xterm received a DECRQLP
$P_{e}=2 \rightarrow$ left button down
$P_{e}=3 \rightarrow$ left button up
$P_{e}=4 \rightarrow$ middle button down
$P_{e}=5 \rightarrow$ middle button up
$P_{e}=6 \rightarrow$ right button down
$P_{e}=7 \rightarrow$ right button up
$P_{e}=8 \rightarrow \mathrm{M} 4$ button down
$P_{e}=9 \rightarrow$ M4 button up
$P_{e}=100 \rightarrow$ locator outside filter rectangle
"button" parameter is a bitmask indicating which buttons are pressed:
$P_{b}=0 \rightarrow$ no buttons down
$P_{b} \& \square \rightarrow$ right button down
$P_{b} \& 2 \rightarrow$ middle button down
$P_{b} \& 4 \rightarrow$ left button down
$P_{b} \& 8 \rightarrow$ M4 button down
"row" and "column" parameters are the coordinates of the locator position in the xterm window, encoded as ASCII decimal.

The "page" parameter is not used by xterm, and will be omitted.

## Operating System Controls

${ }^{\mathrm{OSC}} P_{S} \square ; P_{t} \boxed{\mathrm{ST}}$
$\boxed{\mathrm{OSC}} P_{s} \square ; P_{t}$ 区EL
Set Text Parameters. For colors and font, if $P_{t}$ is a "?", the control sequence elicits a response which consists of the control sequence which would set the corresponding value. The dtterm control sequences allow you to determine the icon name and window title.
$P_{s}=0 \rightarrow$ Change Icon Name and Window Title to $P_{t}$
$P_{s}=1 \rightarrow$ Change Icon Name to $P_{t}$
$P_{s}=2 \rightarrow$ Change Window Title to $P_{t}$
$P_{s}=3 \rightarrow$ Set X property on top-level window. $P_{t}$ should be in the form "prop=value", or just "prop" to delete the property $P_{s}=4 ; c ;$ spec $\rightarrow$ Change Color Number $c$ to the color specified by spec, i.e., a name or RGB specification as per XParseColor. Any number of $c$ name pairs may be given. The color numbers correspond to the ANSI colors 0-7, their bright versions 8-15, and if supported, the remainder of the 88 -color or 256 -color table

If a "?" is given rather than a name or RGB specification, xterm replies with a control sequence of the same form which can be used to set the corresponding color. Because more than one pair of color number and specification can be given in one control sequence, xterm can make more than one reply.

The 8 colors which may be set using 1 , 0 through 1 are denoted dynamic colors, since the corresponding control sequences were the first means for setting xterm's colors dynamically, i.e., after it was started. They are not the same as the ANSI colors. One or more parameters is expected for $P_{t}$. Each succesive parameter changes the next color in the list. The value of $P_{s}$ tells the starting point in the list. The colors are specified by name or RGB specification as per XParseColor.

If a "?" is given rather than a name or RGB specification, xterm replies with a control sequence of the same form which can be used to set the corresponding dynamic color. Because more than one pair of color number and specification can be given in one control sequence, xterm can make more than one reply.
$P_{s}=1 \quad 0 \rightarrow$ Change VT100 text foreground color to $P_{t}$
$P_{s}=1 \quad 1 \rightarrow$ Change VT100 text background color to $P_{t}$
$P_{s}=1 \quad 2 \rightarrow$ Change text cursor color to $P_{t}$
$P_{s}=1 \quad 3 \rightarrow$ Change mouse foreground color to $P_{t}$
$P_{s}=1 \quad 4 \rightarrow$ Change mouse background color to $P_{t}$
$P_{s}=1 \quad 5 \rightarrow$ Change Tektronix foreground color to $P_{t}$
$P_{s}=1 \quad 6 \rightarrow$ Change Tektronix background color to $P_{t}$
$P_{s}=17 \rightarrow$ Change highlight color to $P_{t}$
$P_{s}=1 \quad 8 \rightarrow$ Change Tektronix cursor color to $P_{t}$
$P_{s}=4 \quad 6 \rightarrow$ Change Log File to $P_{t}$ (normally disabled by a compile-time option)
$P_{s}=500 \rightarrow$ Set Font to $P_{t}$ If $P_{t}$ begins with a "\#", index in the font menu, relative (if the next character is a plus or minus sign) or absolute. A number is expected but not required after the sign (the default is the current entry for relative, zero for absolute indexing).

## Privacy Message

$\mathrm{PM} P_{t} \boxed{\mathrm{ST}} \quad$ xterm implements no $\triangle \mathrm{PM}$ functions; $P_{t}$ is ignored. $P_{t}$ need not be printable characters.

## PC-Style Function Keys

If xterm does minimal translation of the function keys, it usually does this with a PC-style keyboard, so PC-style function keys result. Sun keyboards are similar to PC keyboards. Both have cursor and scrolling operations printed on the keypad, which duplicate the smaller cursor and scrolling keypads.

X does not predefine NumLock (used for VT220 keyboards) or Alt (used as an extension for the Sun/PC keyboards) as modifiers. These keys are recognized as modifiers when enabled by the numLock resource, or by the DECSET | 1 | 0 | 3 | 5 |
| :--- | :--- | :--- | :--- |
| control sequence. |  |  |  |

The cursor keys transmit the following escape sequences depending on the mode specified via the DECCKM escape sequence.

| Key | Normal |  | Application |  |
| :---: | :---: | :---: | :---: | :---: |
| Cursor Up | CSI | A | ss3 | A |
| Cursor Down | CSI | B | Ss3 | B |
| Cursor Right | Csi | C | Ss3 | C |
| Cursor Left | CSI | D | Ss3 | D |

The home- and end-keys (unlike PageUp and other keys also on the 6-key editing keypad) are considered "cursor keys" by xterm. Their mode is also controlled by the DECCKM escape sequence:

| Key | Normal | Application |  |  |
| :--- | :--- | :--- | :--- | :--- |
| Home | CSI | H |  | ss3 |
| E |  |  |  |  |
| End | CSI | F | sS3 | F |

The application keypad transmits the following escape sequences depending on the mode specified via the DECPNM and DECPAM escape sequences. Use the NumLock key to override the application mode.

Not all keys are present on the Sun/PC keypad (e.g., PF1, Tab), but are supported by the program.

| Key | Numeric |  | Application |  |  | Terminfo | Termcap |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Space | SP |  | Ss3 | SP | S | - | - |
| Tab | TAB |  | Ss3 | I | I | - | - |
| Enter | CR |  | Ss3 | M | M | kent | @ 8 |
| PF1 | Ss3 | P | Ss3 | $\mathbf{P}$ | P | kf1 | k1 |
| PF2 | Ss3 | Q | Ss3 | Q | Q | kf2 | k2 |
| PF3 | Ss3 | R | Ss3 | R | R | kf3 | k3 |
| PF4 | Ss3 | S | Ss3 | S | S | kf4 | k4 |
| * (multiply) | * |  | Ss3 | j | j | - | - |
| + (add) | + |  | Ss3 | k | k | - | - |
| , (comma) | , |  | Ss3 | 1 | 1 | - | - |
| - (minus) | - |  | Ss3 | m | n | - | - |

| . (Delete) | - | CSI | 3 | $\sim$ | - | - |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| / (divide) | / | Ss3 | 0 |  | - | - |
| 0 (Insert) | 0 | CSI | 2 | $\sim$ | - |  |
| 1 (End) | 1 | Ss3 | F |  | kc1 | K4 |
| 2 (DownArrow) | 2 | CSI | B |  | - | - |
| 3 (PageDown) | 3 | csi | 6 |  | kc3 | K5 |
| 4 (LeftArrow) | 4 | CSI | D |  | - | - |
| 5 (Begin) | 5 | CSI | E |  | kb2 | K2 |
| 6 (RightArrow) | 6 | csi | C |  | - | - |
| 7 (Home) | 7 | Ss3 | H |  | ka1 | K1 |
| 8 (UpArrow) | 8 | csi | A |  | - | - |
| 9 (PageUp) | 9 | csi | 5 | $\sim$ | ka3 | K3 |
| $=$ (equal) | = | Ss3 | X |  | - | - |

They also provide 12 function keys, as well as a few other special-purpose keys.

| Key | Escape Sequence |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| F1 | Ss3 | P |  |  |
| F2 | Ss3 | Q |  |  |
| F3 | Ss3 | R |  |  |
| F4 | SS3 | S |  |  |
| F5 | CSI | 1 | 5 | $\sim$ |
| F6 | CSI | 1 | 7 |  |
| F7 | CSI | 1 | 8 | $\sim$ |
| F8 | CSI | 1 | 9 | $\sim$ |
| F9 | CSI | 2 | 0 |  |
| F10 | CSI | 2 | 1 | $\sim$ |
| F11 | CSI | 2 | 3 | $\sim$ |
| F12 | CSI | 2 | 4 | $\sim$ |

Older versions of xterm implement different escape sequences for F1 through F4. These can be activated by setting the oldXtermFKeys resource. However, since they do not correspond to any hardware terminal, they have been deprecated. (The DEC VT220 reserves F1 through F5 for local functions such as Setup).

| Key |  | Escape Sequence |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
| F1 | CSI | $\mathbf{1}$ | $\mathbf{1}$ | $\sim$ |  |
| F2 | CSI | $\mathbf{1}$ | $\mathbf{2}$ | $\sim$ |  |
| F3 | CSI | $\mathbf{1}$ | $\mathbf{3}$ | $\sim$ |  |
| F4 | CSI | $\mathbf{1}$ | $\mathbf{4}$ | $\sim$ |  |

In normal mode, i.e., a Sun/PC keyboard when the sunKeyboard resource is false, xterm recognizes function key modifiers which are parameters appended before the final character of the control sequence.

| Code | Modifiers |
| :---: | :--- |
| 2 | Shift |
| 3 | Alt |
| 4 | Shift + Alt |
| 5 | Control |
| 6 | Shift + Control |
| 7 | Alt + Control |
| 8 | Shift + Alt + Control |

For example, shift-F5 would be sent as $\square$
If the alwaysUseMods resource is set, the Meta modifier also is recognized, making parameters 9 through 16.

## VT220-Style Function Keys

However, xterm is most useful as a DEC VT102 or VT220 emulator. Set the sunKeyboard resource to true to force a Sun/PC keyboard to act like a VT220 keyboard.
The VT102/VT220 application keypad transmits unique escape sequences in application mode, which are distinct from the cursor and scrolling keypad:

The VT220 provides a 6-key editing keypad, which is analogous to that on the PC keyboard. It is not affected by DECCKM or DECPNM/DECPAM:

| Key | Normal |  |  | Application |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Insert | CSI | 2 | $\sim$ | CSI | 2 | ~ |
| Delete | CSI | 3 | $\sim$ | CSI | 3 | $\sim$ |
| Home | CSI | 1 | $\sim$ | CSI | 1 |  |
| End | CSI | 4 | $\sim$ | CSI | 4 | $\sim$ |
| PageUp | CSI | 5 | $\sim$ | CSI | 5 | $\sim$ |
| PageDown | CSI | 6 |  | CSI | 6 |  |

The VT220 provides 8 additional function keys. With a Sun/PC keyboard, access these keys by Control/F1 for F13, etc.

| Key | Escape Sequence |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| F13 | CSI | 2 | 5 |  |
| F14 | CSI | 2 | 6 |  |
| F15 | CSI | 2 | 8 |  |
| F16 | CSI | 2 | 9 |  |
| F17 | CSI | 3 | 1 |  |
| F18 | CSI | 3 | 2 |  |
| F19 | CSI | 3 | 3 |  |

| $\operatorname{CsI}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\sim$ |
| :--- | :--- | :--- | :--- |

## VT52-Style Function Keys

A VT52 does not have function keys, but it does have a numeric keypad and cursor keys. They differ from the other emulations by the prefix. Also, the cursor keys do not change:

| Key | Normal/Application |  |
| :--- | :--- | :--- |
| Cursor Up | ESC | A |
| Cursor Down | ESC | B |
| Cursor Right | ESC | C |
| Cursor Left | ESC | D |

The keypad is similar:

| Key | Numeric |  | Application |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Space | SP |  | ESC | ? | SP |
| Tab | TAB |  | ESC | ? | I |
| Enter | CR |  | ESC | ? | M |
| PF1 | ESC | $\mathbf{P}$ | ESC | P |  |
| PF2 | ESC | Q | ESC | Q |  |
| PF3 | ESC | R | ESC | R |  |
| PF4 | ESC | S | ESC | S |  |
| * (multiply) | * |  | ESC | ? | j |
| + (add) | + |  | ESC | ? | k |
| , (comma) | , |  | ESC | ? | I |
| - (minus) | - |  | ESC | ? | m |
| - (period) | - |  | ESC | ? | n |
| / (divide) | 1 |  | ESC | ? | 0 |
| 0 | 0 |  | ESC | ? | p |
| 1 | 1 |  | ESC | ? | q |
| 2 | 2 |  | ESC | ? | $\mathbf{r}$ |
| 3 | 3 |  | ESC | ? | S |
| 4 | 4 |  | ESC | ? | t |
| 5 | 5 |  | ESC | ? | u |
| 6 | 6 |  | ESC | ? | v |
| 7 | 7 |  | ESC | ? | w |
| 8 | 8 |  | ESC | ? | $\mathbf{x}$ |
| 9 | 9 |  | ESC | ? | y |
| $=$ (equal) | = |  | ESC | ? | $\mathbf{X}$ |

## Sun-Style Function Keys

The xterm program provides support for Sun keyboards more directly, by a menu toggle that causes it to send Sunstyle function key codes rather than VT220. Note, however, that the sun and VT100 emulations are not really compatible. For example, their wrap-margin behavior differs.
Only function keys are altered; keypad and cursor keys are the same. The emulation responds identically. See the xterm-sun terminfo entry for details.

## HP-Style Function Keys

Similarly, xterm can be compiled to support HP keyboards. See the xterm-hp terminfo entry for details.

## The Alternate Screen Buffer

Xterm maintains two screen buffers. The normal screen buffer allows you to scroll back to view saved lines of output up to the maximum set by the saveLines resource. The alternate screen buffer is exactly as large as the display, contains no additional saved lines. When the alternate screen buffer is active, you cannot scroll back to view saved lines. Xterm provides control sequences and menu entries for switching between the two.
Most full-screen applications use terminfo or termcap to obtain strings used to start/stop full-screen mode, i.e., smcup and rmсир for terminfo, or the corresponding $t i$ and te for termcap. The titeInhibit resource removes the $t i$ and te strings from the TERMCAP string which is set in the environment for some platforms. That is not done when xterm is built with terminfo libraries because terminfo does not provide the whole text of the termcap data in one piece. It would not work for terminfo anyway, since terminfo data is not passed in environment variables; setting an environment variable in this manner would have no effect on the application's ability to switch between normal and
 normal and alternate screen buffers simply disable the switching. They add other features such as clearing the display for the same reason: to make the details of switching independent of the application that requests the switch.

## Mouse Tracking

The VT widget can be set to send the mouse position and other information on button presses. These modes are typically used by editors and other full-screen applications that want to make use of the mouse.

There are six mutually exclusive modes. One is DEC Locator mode, enabled by the DECELR ${ }_{\square S I} P_{s} \square ; P_{s}{ }^{\square} \mathrm{z}$ control sequence, and is not described here (control sequences are summarized above). The remaining five modes
 control sequence.

Manifest constants for the parameter values are defined in xcharmouse.h as follows:

| \#define SET_X10_MOUSE |  |  |
| :--- | :--- | :---: |
| \#define SET_VT200_MOUSE | 1000 |  |
| \#define SET_VT200_HIGHLIGHT_MOUSE | 1001 |  |
| \#define SET_BTN_EVENT_MOUSE | 1002 |  |
| \#define SET_ANY_EVENT_MOUSE | 1003 |  |

The motion reporting modes are strictly xterm extensions, and are not part of any standard, though they are analogous to the DEC VT200 DECELR locator reports.

Parameters (such as pointer position and button number) for all mouse tracking escape sequences generated by xterm encode numeric parameters in a single character as value +32 . For example, $!$ specifies the value 1 . The upper left character position on the terminal is denoted as 1,1 .

X10 compatibility mode sends an escape sequence only on button press, encoding the location and the mouse button pressed. It is enabled by specifying parameter 9 to DECSET. On button press, xterm sends CSI $\mathbf{M} C_{b} C_{x} C_{y}$ ( 6 characters). $C_{b}$ is button-1. $C_{x}$ and $C_{y}$ are the x and y coordinates of the mouse when the button was pressed.

Normal tracking mode sends an escape sequence on both button press and release. Modifier key (shift, ctrl, meta) information is also sent. It is enabled by specifying parameter 1000 to DECSET. On button press or release, xterm sends $\mathrm{CSI} \mathrm{M} C_{b} C_{x} C_{y}$. The low two bits of $C_{b}$ encode button information: $0=\mathrm{MB} 1$ pressed, $1=\mathrm{MB} 2$ pressed, $2=\mathrm{MB} 3$ pressed, $3=$ release. The next three bits encode the modifiers which were down when the button was pressed and are added together: $4=$ Shift, $8=$ Meta, $16=$ Control. Note however that the shift and control bits are normally unavailable because xterm uses the control modifier with mouse for popup menus, and the shift modifier is used in the default translations for button events. The Meta modifier recognized by xterm is the modl mask, and is not necessarily the "Meta" key (see xmodmap). $C_{x}$ and $C_{y}$ are the x and y coordinates of the mouse event, encoded as in X10 mode.

Wheel mice may return buttons 4 and 5. Those buttons are represented by the same event codes as buttons 1 and 2 respectively, except that 64 is added to the event code. Release events for the wheel buttons are not reported.

Mouse hilite tracking notifies a program of a button press, receives a range of lines from the program, highlights the region covered by the mouse within that range until button release, and then sends the program the release coordinates. It is enabled by specifying parameter 1001 to DECSET. Highlighting is performed only for button 1, though other button events can be received. Warning: use of this mode requires a cooperating program or it will hang xterm. On button press, the same information as for normal tracking is generated; xterm then waits for the program to send mouse tracking information. All X events are ignored until the proper escape sequence is received from the pty: $\mathrm{CSI}^{\mathrm{CSI}} P_{s} \square ; P_{s} \square ; P_{s} \square ; P_{s} \square ; P_{s} \overline{\mathrm{~T}}$. The parameters are func, startx, starty, firstrow, and lastrow. func is nonzero to initiate hilite tracking and zero to abort. startx and starty give the starting x and y location for the highlighted region. The ending location tracks the mouse, but will never be above row firstrow and will always be above row lastrow. (The top of the screen is row 1.) When the button is released, xterm reports the ending position one of two ways: if the start and end coordinates are valid text locations: CSI t $C_{x} C_{y}$. If either coordinate is past the end of the line: $\mathrm{CSI} \mathrm{T} C_{x} C_{y} C_{x} C_{y} C_{x} C_{y}$. The parameters are startx, starty, endx, endy, mousex, and mousey. startx, starty, endx, and endy give the starting and ending character positions of the region. mousex and mousey give the location of the mouse at button up, which may not be over a character.

Button-event tracking is essentially the same as normal tracking, but xterm also reports button-motion events. Motion events are reported only if the mouse pointer has moved to a different character cell. It is enabled by specifying parameter 1002 to DECSET. On button press or release, xterm sends the same codes used by normal tracking mode. On button-motion events, xterm adds 32 to the event code (the third character, $C_{b}$ ). The other bits of the event code specify button and modifier keys as in normal mode. For example, motion into cell $\mathrm{x}, \mathrm{y}$ with button 1 down is reported as CSI M @ $C_{x} C_{C}$. ( @ = $=32+0$ (button 1$)+32$ (motion indicator) ). Similarly, motion with button 3 down is reported as | CSI | M | B | $C_{x} C_{y}$. | $(\boxed{\mathrm{B}}=32+2$ (button 3$)+32$ (motion indicator) $)$. . 10 |
| :--- | :--- | :--- | :--- | :--- | :--- |

Any-event mode is the same as button-event mode, except that all motion events are reported, even if no mouse button is down. It is enabled by specifying 1003 to DECSET.

## Tektronix 4014 Mode

Most of these sequences are standard Tektronix 4014 control sequences. Graph mode supports the 12 -bit addressing of the Tektronix 4014. The major features missing are the write-through and defocused modes. This document does not describe the commands used in the various Tektronix plotting modes but does describe the commands to switch modes.

## VT52 Mode

Parameters for cursor movement are at the end of the ESC $Y$ escape sequence. Each ordinate is encoded in a single character as value +32 . For example, $\qquad$ is 1 . The screen coodinate system is 0 -based.
